Not illustrated. 1903 Excerpt: .Operation for detachment of the retina is carried out by means of an aspiratory needle in which the fluid is withdrawn and injection treatment directed into the vitreous humor of salines--Gruening s method of treatment for pannus is by producing an acute inflammation of the cornea by scraping the surface and denuding the cornea. In Gruening s method for removing steel from the cornea and deeper structures, a magnet is employed--Guerin s iridectomy: A cross section is made in the upper part of the iris. In his operation for the relief of strabismus, a twisted instrument, employed for cutting the muscles of the eye, saws the rectus muscle through by being dipped down, drawn forward and outward. For iridectomy, a portion of the cornea is punched out by an instrument resembling a punch, and the iris falls into the incision--Halpin s removal of the lacrymal gland:...
