Oxbow Books, United Kingdom, 2007. Paperback. Condition: New. New. Language: English . Brand New Book. The archaeological investigation of shell middens has a long and rich history. By the mid 1830s, the presence of artefacts found with large accumulations of shell along the Danish coast had successfully demonstrated that these sites were the result of human activity rather than natural processes. At about the same time in other parts of Europe, shell middens were also being discovered and written about - a process which continued throughout Europe as time went on. Until recently, European Atlantic shell middens attracted only sporadic interest from archaeologists and scientists. However, there has been a notable resurgence in the excavations of shell middens over the last few decades which has been accompanied by the development of a range of new scientific methods applicable to shells and other midden components. There now exists a sizeable amount of information on shell middens, their variability and insights that they have revealed through scientific investigation. A workshop was organised in September 2005 in the Department of Archaeology, University of York, which brought together colleagues working on shell middens along the Atlantic facade of Europe. The aims were to discuss the current work that was being carried out in each country, to consider the use of coastal resources through prehistory and to present new scientific techniques which were being developed. This volume presents the papers from that conference, and is organised geographically, starting with Scandinavia, moving down to Britain, Ireland and France and then to Iberia. For each of these areas there are some papers which provide reviews of the overall state of shell midden research of coastal archaeology. There are also some case studies which provide more in-depth information on sites which are less well known. In addition, several...
